

EXPORTS

Argo 300 (Base), 240 ch. AM/FM 26.065-28.755MHz (O2A-PLL):

No name on unit anywhere, also I.D. of any kind is not on unit! Identical PCB and Fo's as the Argo 300 mobile. See write-up this volume....

Argo 5000 (Base), 240 ch. AM/FM/SSB/CW 26.065-28.755MHz (O2A-PLL):

Another of the Argo series, no name or I.D. anywhere. Unit is 3-xtal multiplex chassis. "Handles" on front for 'rack mounting'; but doubt will fit standard size rack; as is only 13½" wide. Clarifier is split TX/RX; Hi/Low RF Power switch (for AM/FM modes); phone jack in front. (Special note: NO owner's manual or freq. chart came with unit, but a line-up procedure and very bad - USELESS - copy of schematic did.) I don't think that the lineup procedure will accompany all of these units. Use any of the standard O2A Export multiplex schematics for troubleshooting and the Palomar 2400 alignment procedure as a guide. (CAUTION: Ed. Note....unit I had for evaluation ran HOT in RX mode, power supply might give some problems....)

Hygain 2795, 120 ch. AM/FM/SSB 26.515-27.855MHz. (O2A-PLL):

Basic O2A-Direct Switch Chassis; owner's manual and correct schematic accompanies unit. This is a basic 'no-frills' unit, the readout does count to 80. Use the Export 'O2A' alignment as a guide!

Colonel FR360, 120 ch. AM/SSB 26.965-27.805MHz, AND, 28.365-28.805MHz.

(MC145106-PLL): This is a long gone unit from what I understand, but some are popping up. It originally was one of the 1st 'Exports' to make it into the U.S. Two different frequency bands in this unit, and also has a direct digital frequency readout....NOT A TRUE FREQUENCY COUNTER! The clarifier is still a clarifier, and if you want to modify - check out the chassis! Almost identical to Palomar 500SSB (Late).

Superstar 1700S, 120 ch. AM/FM 26.515-27.855MHz. (LC7120-PLL):

Another No-Frills unit... schematic in owner's manual is wrong. Similar to other AM/FM 3-stage RF output units. See write-up in this volume.

No other new information on Export units up to 1 Sept..... BUT, the rumors are still out there about a couple of things that are supposed to out perform the Jackson...? As for the export market shutting down, I really can't say as they are still out there if you know where to look.....
