

INTRODUCTION

By Doris Selman

Ten years and twenty-seven volumes of SECRET CB has far exceeded my expectations. I am proud of this accomplishment and proud to be associated with all who have helped us to succeed in this endeavor.

As most of you know by now the Federal Communications Commission has amended Part 97 of the FCC regulations to allow NOVICE to go voice from 28.300MHz to 28.500MHz. Therefore, Card-Kit Electronics has come out with their Techs Choice "C" kit and Techs Choice "D" kit covering the NOVICE HAM BAND. We have come out with two SECRET CB NOVICE kits for the Jackson radio. Jackson NOVICE "A" kit and Jackson NOVICE "B" kit. New Product Information on these and other kits in this volume.

It has been confirmed by Dynascan that they will bring back the COBRA 29LTD. New Name - COBRA 29LTD CLASSIC. Packaging will show picture of a truck in recognition to the truck drivers that initiated this decision. No firm date for release at the time of this printing.

We still need ideas and input from you technicians. If "TWO HEADS ARE BETTER THAN ONE", just think of how much better thousands would be!

I would like to recognize again the editor of SECRET CB, William G Wentz Jr.. THANKS BILL!
